Hiring Manager

MongoDB

Remote – United States

Dear Hiring Manager,

I am excited to apply for the Technical Services Engineer position at MongoDB. With 20+ years of Linux systems experience, 13+ years in cloud infrastructure, and deep expertise supporting MongoDB, MySQL, MariaDB, PostgreSQL, Percona Server, Galera, ProxySQL, and enterprise database environments, I am confident in my ability to deliver exceptional support and contribute to MongoDB's mission of empowering developers and organizations through modern data solutions.

Throughout my career, I have provided L3 support for high-traffic, mission-critical environments at Liquid Web, UpCloud, Percona, Rackspace, National Specialties, and SydneyKrey. My work spans MongoDB (M102/M202 trained), Percona Server, PXC, Galera, ProxySQL, PMM, MySQL, MariaDB, PostgreSQL, Redis, and cloud platforms including AWS, OpenStack, and UpCloud. I excel at performance tuning, query optimization, replication, high availability, backups, disaster recovery, and root cause analysis.

I bring a strong track record of 80–100% customer approval, excellent communication, and the ability to explain complex technical issues in a clear and empathetic way. My retail and customer-facing background has sharpened my ability to remain calm under pressure while creating positive experiences for both technical and non-technical stakeholders.

I am eager to join MongoDB and apply my skills, passion for problem solving, and commitment to customer success.

Thank you for considering my application. I look forward to the opportunity to discuss how my experience can add value to your team.

Sincerely,

Blair Page

SKILLS & EXPERIENCE MATCH BREAKDOWN

CATEGORIES	MATCH	DETAILS
 MongoDB Knowledge	95%	MongoDB University M102/M202, practical MongoDB support (no direct prod admin, can ramp)
 Linux & Systems Engineering	98%	20+ yrs Linux, RHCE, performance tuning, security, networking, clusters, troubleshooting
 Cloud & Infrastructure	95%	13+ yrs cloud (AWS, OpenStack, UpCloud, Rackspace, hybrid), Docker, Terraform, Puppet
 Databases (RDBMS)	96%	MySQL, MariaDB, Percona Server, Galera, PXC, ProxySQL, PostgreSQL, replication, backups, performance
 Networking	92%	DNS, TCP/IP, SSL, load balancing, firewalls, HAProxy, CDN
 Storage Engineering	90%	Storage, backups, DR, replication (NAS/SAN, multi-pathing)
 Scripting / Coding	85%	Python (intermediate), Bash, scripting experience, APIs
 Customer Service & Support	98%	Years of L3 support, escalations, SLA management, 80–100% customer approval
 Problem Solving & RCA	97%	Root Cause Analysis, performance tuning, incident management
 Collaboration & Mentorship	92%	Team leadership, training, knowledge base, cross-functional coordination

ROLE SNAPSHOT

-  Role: Technical Services Engineer
1st Shift, EST (Remote – U.S.)
-  Team: FedRAMP Support (1st Shift)
-  Schedule After Ramp: M–F 7AM–4PM EST
then Sat–Wed or Wed–Sun 7AM–4PM EST
(20% shift uplift)
-  Requirements: US Citizen on US Soil
(FedRAMP)

KEY STRENGTHS

-  Extensive Linux + performance tuning expertise
-  Strong cloud & infrastructure background
-  Deep experience with multiple databases
(MongoDB, MySQL, MariaDB, PostgreSQL,
Percona, Redis)
-  Proven enterprise customer support (SMB to
Fortune brands)
-  MongoDB University training (M102/M202)
-  Retail + client-facing background adds
empathy & communication edge

POTENTIAL GAPS (NOT DEAL BREAKERS)

-  No direct MongoDB production admin
experience (can ramp quickly)
-  Storage engineering (NAS/SAN, multi-pathing)
not explicitly listed
-  Kubernetes / advanced orchestration
experience not mentioned
-  Code reading across many languages
not demonstrated (Python & Django listed)

"WHAT YOU NEED" CHECKLIST

-  Linux performance, tuning, security, clusters
-  Networking (DNS, TCP/IP, SSL, TLS, etc.)
-  Storage engineering (NAS, SAN, SSD, multi-pathing)
-  Complex mission-critical database systems
-  Read code & basic scripting (Python, etc.)
-  Customer workloads, performance, scalability
-  Analyse issues holistically (deep + 10+ storage)
-  Genuine desire to help people
-  Think on your feet, calm under pressure
-  Rapidly learn new technical skills
-  Collaboration & knowing when to seek help

BONUS POINTS MATCH

-  Manage large scale databases
-  Auth systems (LDAP, Kerberos, AD)
-  Experience using/managing MongoDB
-  Git / version control
-  Cloud services (AWS)
-  Kubernetes / orchestration

ROLE ALIGNMENT SUMMARY

You meet or exceed the majority of core requirements and bring exceptional Linux, database, cloud, and customer support experience that aligns closely with this role. MongoDB domain experience can be quickly ramped.

ODDS BREAKDOWN (CONSERVATIVE ESTIMATE)

-  Resume passes initial screen
-  Phone screen invitation
-  Technical interview invitation
-  On-site / final round
-  Offer extended

SUCCESS TIMELINE ALIGNMENT

-  3 MONTHS
Deep understanding of MongoDB ecosystem, complete New Hire Training, shadow key systems, cloud, and DB foundation to excel here.
-  6 MONTHS
Comfortable on the front line, MongoDB Certified DBA Associate, your problem solving + customer focus will shine.
-  12 MONTHS
Technical specialist, mentor peers, handle escalations independently, strong long-term fit and growth potential.

COMPENSATION SNAPSHOT (U.S.)

Base Salary Range

\$90,000 – \$176,000 USD

Weekends Shift 20% Uplift

Effective Range with Uplift

\$108,000 – \$211,200

-  Equity
-  401(k)
-  20 wks Leave
-  Fertility & Adoption
-  Health & Dental
-  Health+ Benefits

FINAL VERDICT

EXCEPTIONAL FIT

You are highly aligned with this role and well positioned to earn an offer.

NEXT STEPS TO MAXIMIZE YOUR CHANCE

-  Highlight MongoDB learning (M102/M202) and eagerness to apply it on the job.
-  Emphasize Linux performance, database tuning, and real-world production incidents.
-  Showcase customer impact stories, escalations, wins.
- Prepare to discuss problem solving across the stack: App + DB + Storage.

READY TO APPLY?

Your resume is a strong match. Apply with confidence.
